Important Notice Concerning Telephone Dialing Instructions:

When you place local calls across the state line from the 913 to the 816 area code (or vice versa), you need to dial the area code before the number (10 digits instead of seven). You don't need to dial "1" first except for long distance calls; local calls that are free remain so.

The area affected generally includes Johnson and Wyandotte Counties in Kansas and large portions of Jackson and Clay in Missouri. The reason for the area code prefix is due to the increasing demand for large telephone numbers resulting from the growth of the cellular and paging industries.
